Projects showcase

Agentic Systems & Workflow Automation

This presentation highlights selected projects across healthcare, fintech, telecom, and platform operations, with a focus on the agentic systems, automated workflows, and technical integrations built within each one.

LangGraphJS

AWS Bedrock

n8n

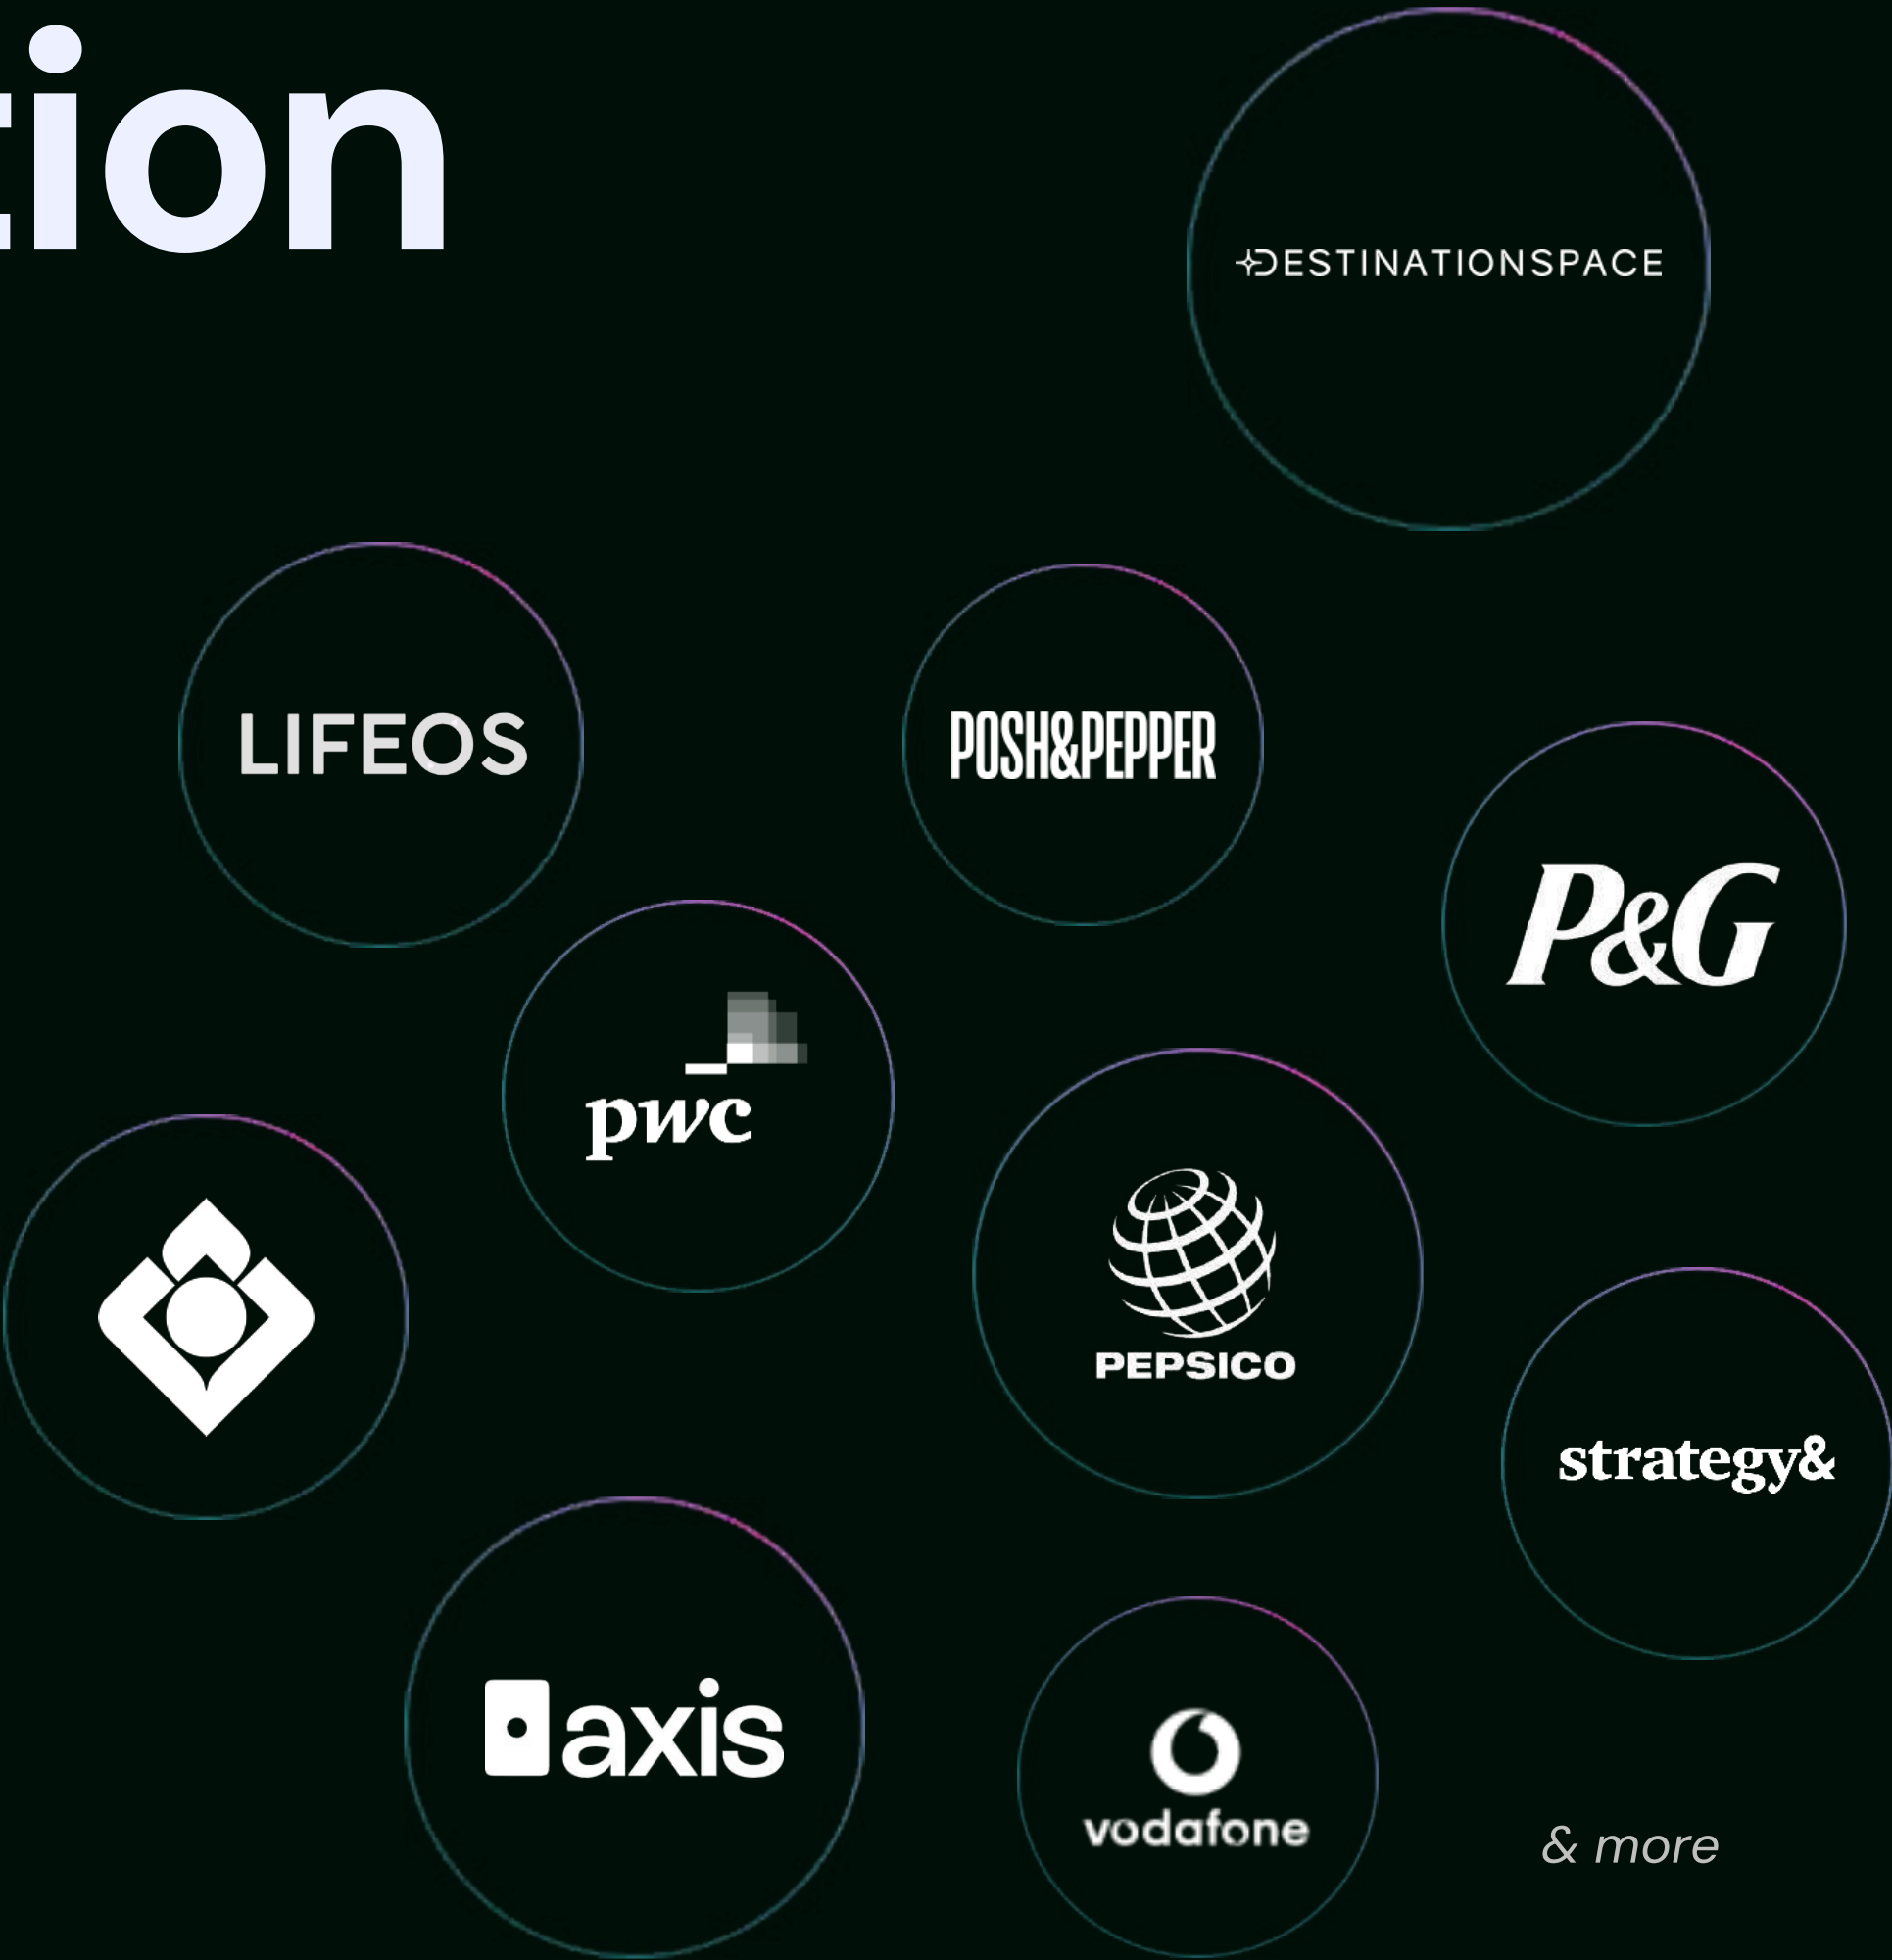

Vertex AI

PostgreSQL

Neo4j

Node.js

LiveKit

Now building AI systems that automate work **reliably.**

Over the past 12 years, my career has evolved from product design into AI automations and agentic systems across startups, enterprise platforms, and regulated environments.

My focus today is on building AI-first systems that connect tools, orchestrate decisions, reduce or terminate manual operations, and make complex products work **reliably, at scale.**

The Clinical-Grade
AI Workspace.

HealthOS

Agentic workflow layer
Healthcare AI platform

SYSTEM SURFACE

Worked on the agentic automation layer for clinical documentation, research support, ambient scribing, and prior-authorization in a HIPAA- and GDPR-sensitive environment.

SPECIALIZED AGENTS

45+

INTEGRATED APIS

28

AUTONOMOUS
WORKFLOWS

WORKFLOW SURFACE

- Patient intake and recurring forms.
- Research retrieval and medical evidence lookup.
- Documentation capture and authorization-adjacent automation.
- External medical database integration including PubMed and Cochrane.

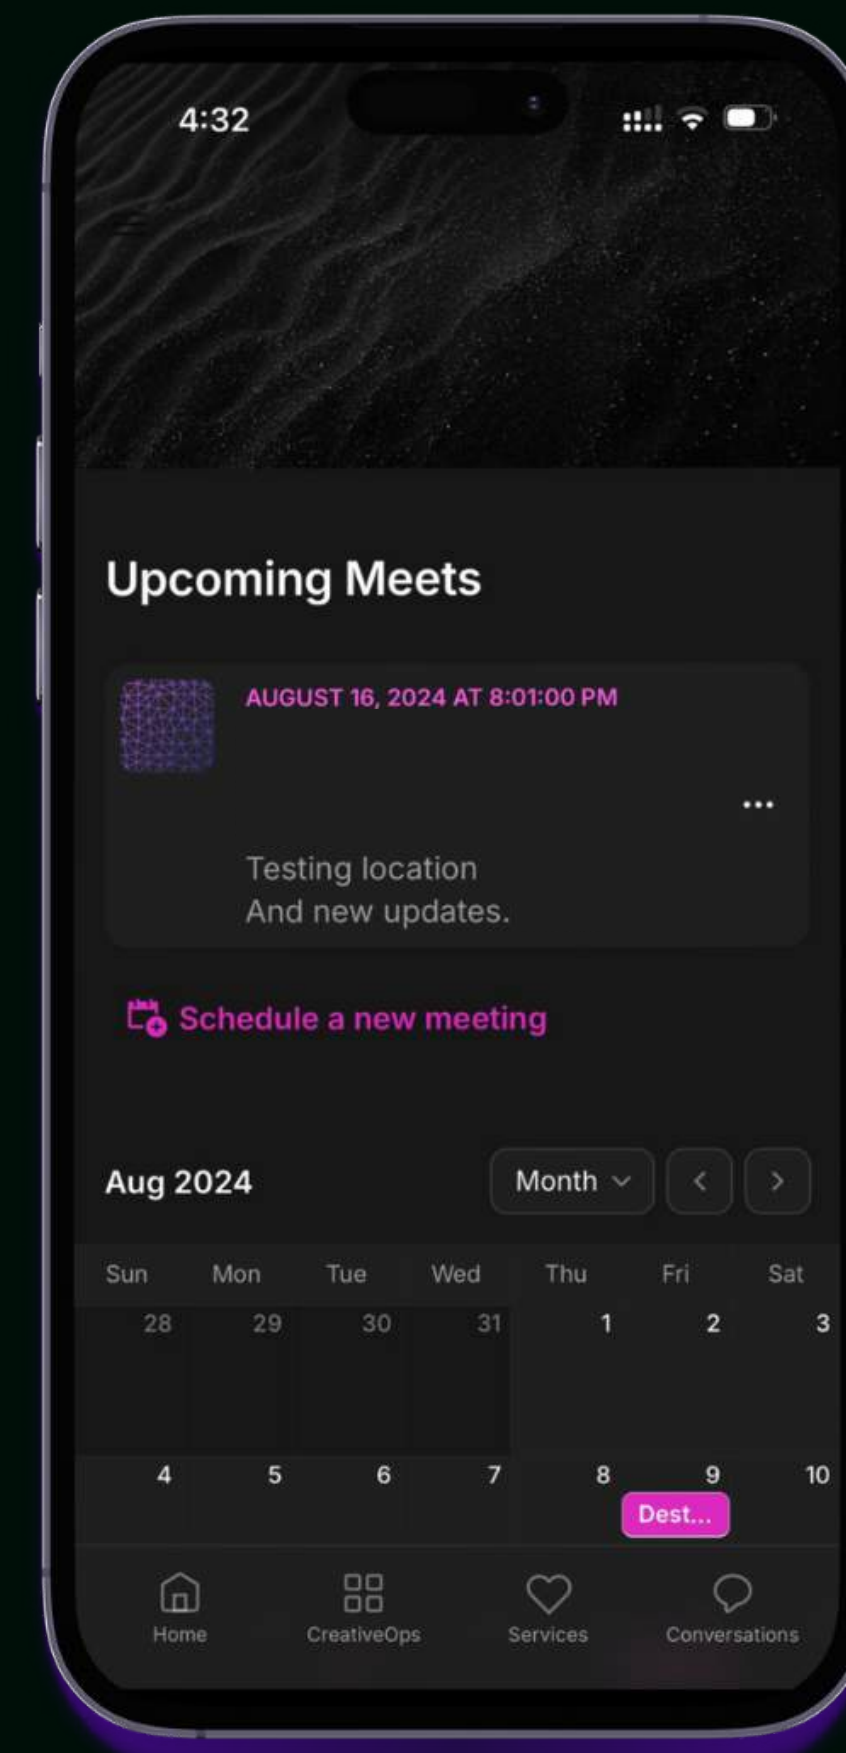

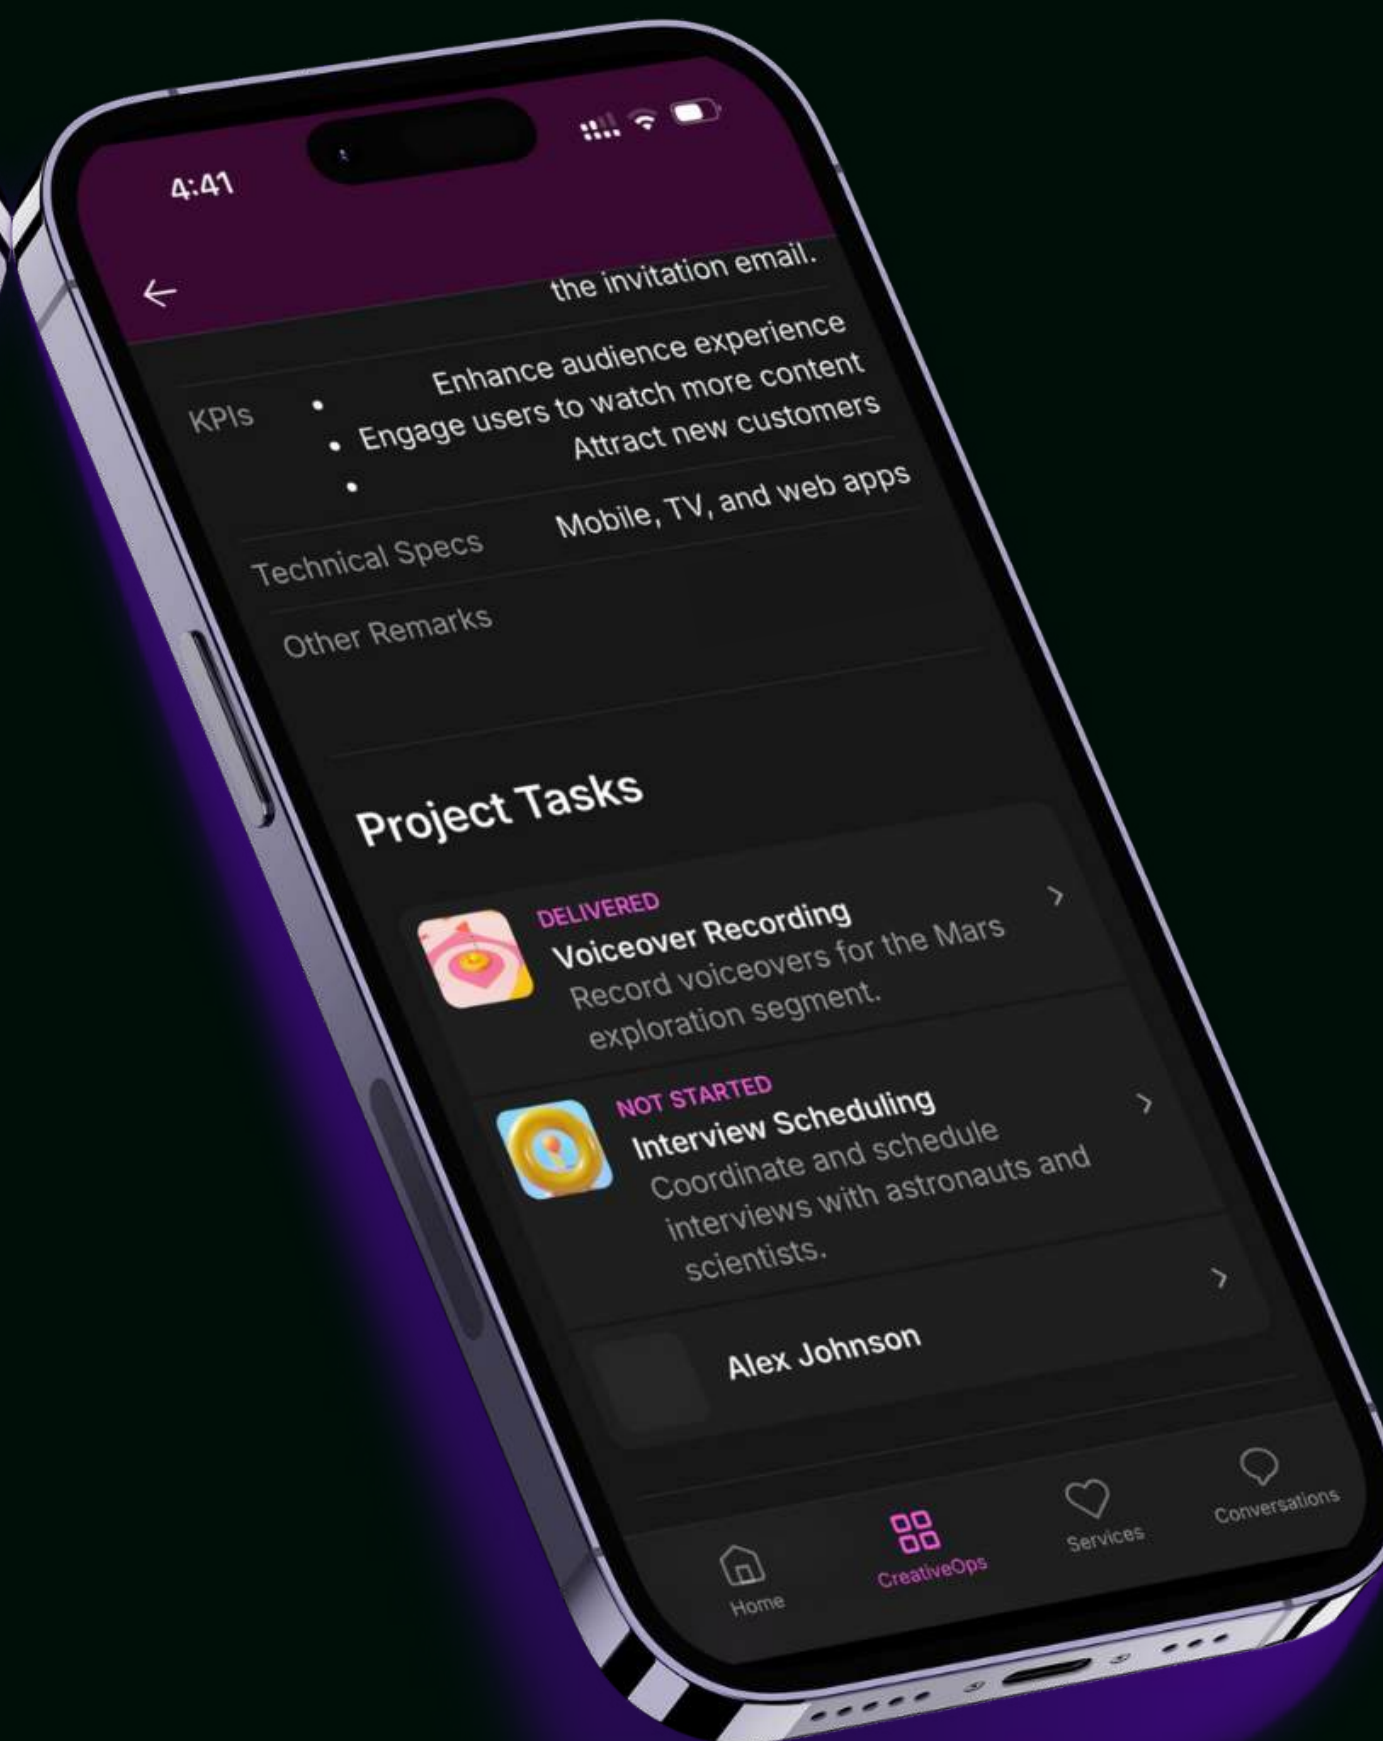

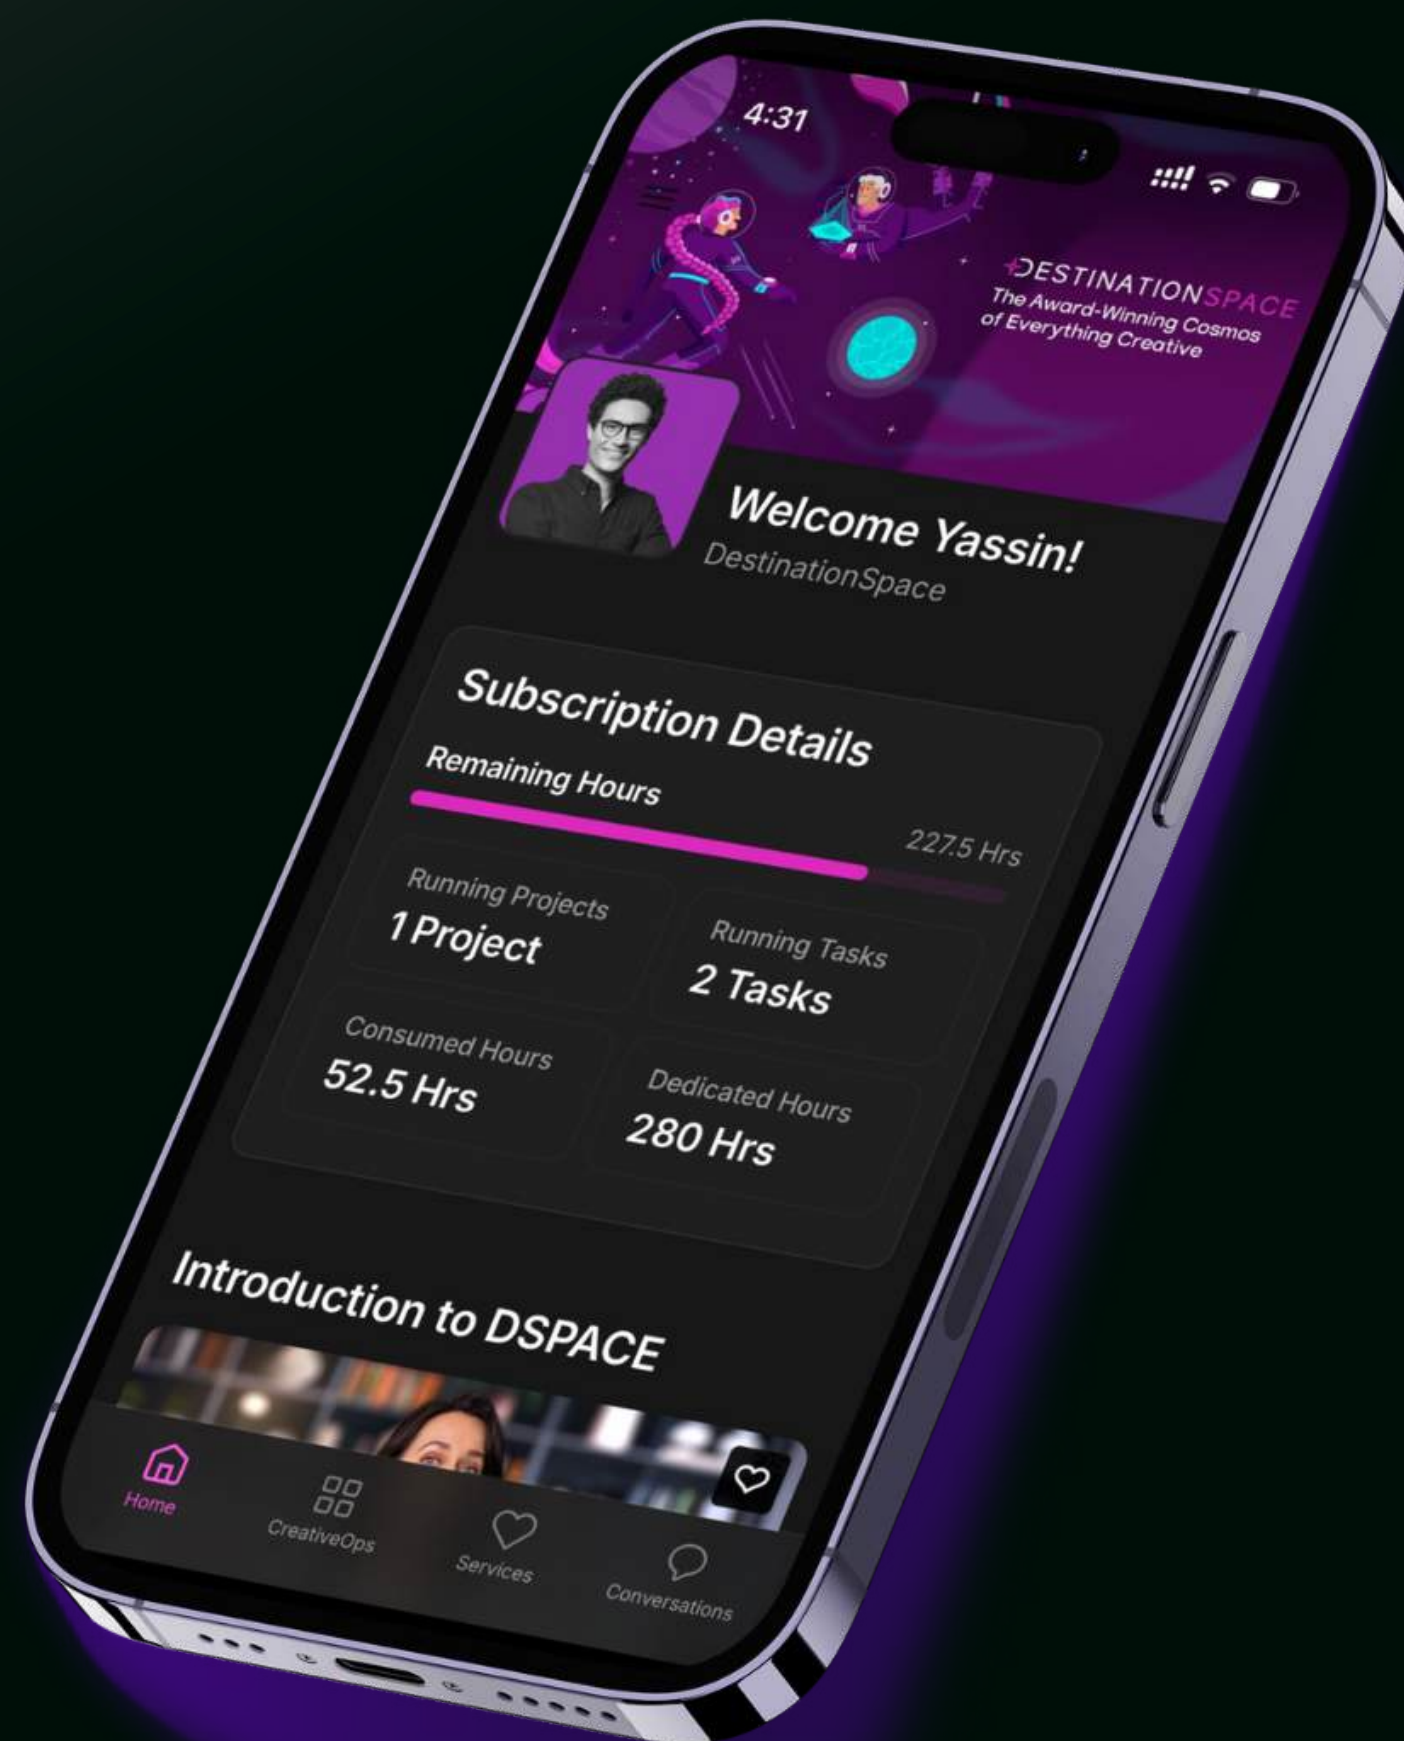

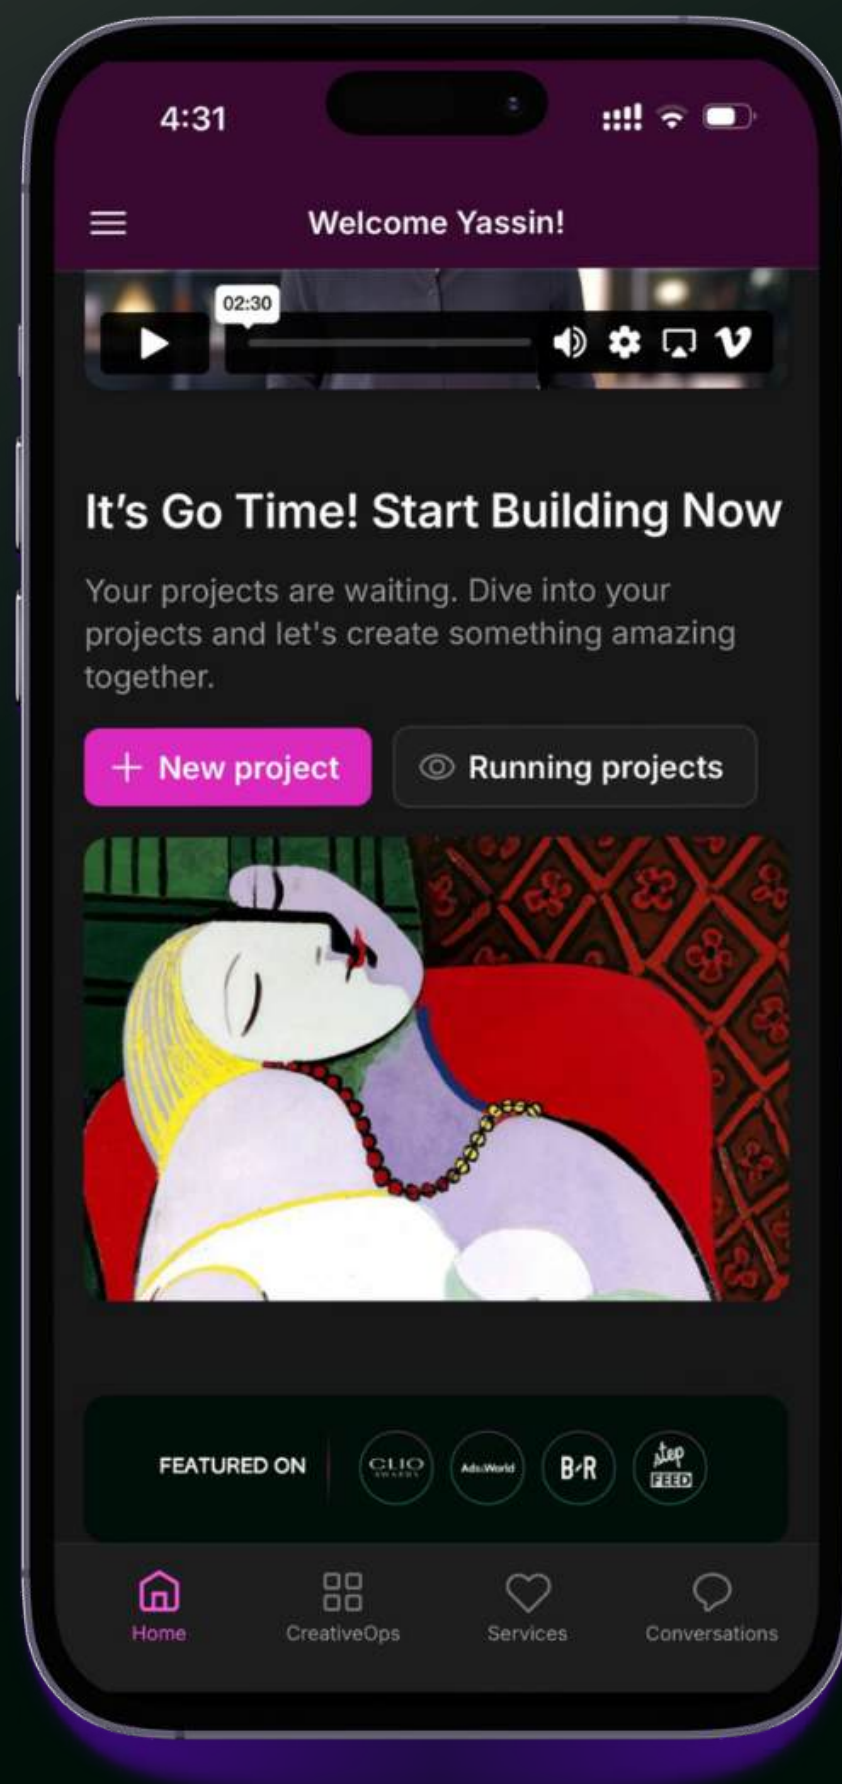

DELIVERABLES

- Main orchestrator plus four task-specific agents for research, documentation, ambient scribe, and prior authorization.
- Multi-LLM routing and structured execution chains for agent-to-agent handoff.
- Patient-context handling for longer-horizon clinical retrieval.

STACK & OUTCOMES

1. LangGraphJS, AWS Bedrock, NestJS, Next.js, PostgreSQL, LiveKit.
2. Longitudinal context retrieval accuracy improved by 82% in internal testing.
3. Documentation burden reduced by up to 2 hours per clinician day in test usage.

Automation-first platform ops
Talent marketplace system

SYSTEM SURFACE

Built automation flows for a talent platform designed to run with minimal manual platform operations across intake, review, communication, proposal handling, and issue resolution.

CORE OPERATIONAL
SURFACES

WORKFLOW SURFACE

- Reminder and outreach automations.
- Dispute-management handling.
- Proposal handling and response-state transitions.
- Low-touch coordination between hiring-side and talent-side users.

DELIVERABLES

- Rule-based and AI-assisted workflow chains for talent review, acceptance, and platform progression.
- Proposal-routing logic for negotiation, acceptance, rejection, and follow-up states.
- Voice-feedback transcription and briefing flows wired into operational actions.

STACK & OUTCOMES

1. Supabase, n8n, Groq, Slack, Resend, STT services, and LLM models.
2. ZDR-enabled model usage for sensitive workflow paths.
3. Automation turned 100% of platform operations into executable chains instead of manual queue work.

SAIB Travel App

Decision workflows
Multi-currency card experience

SYSTEM SURFACE

Implemented decision workflows for a travel-focused banking product around a multi-currency card and app experience, with automation centered on recommendations, anomaly detection, and context-triggered actions.

EXTERNAL SERVICE
LAYERS

AI

RISK AND
RECOMMENDATION LOGIC

WORKFLOW SURFACE

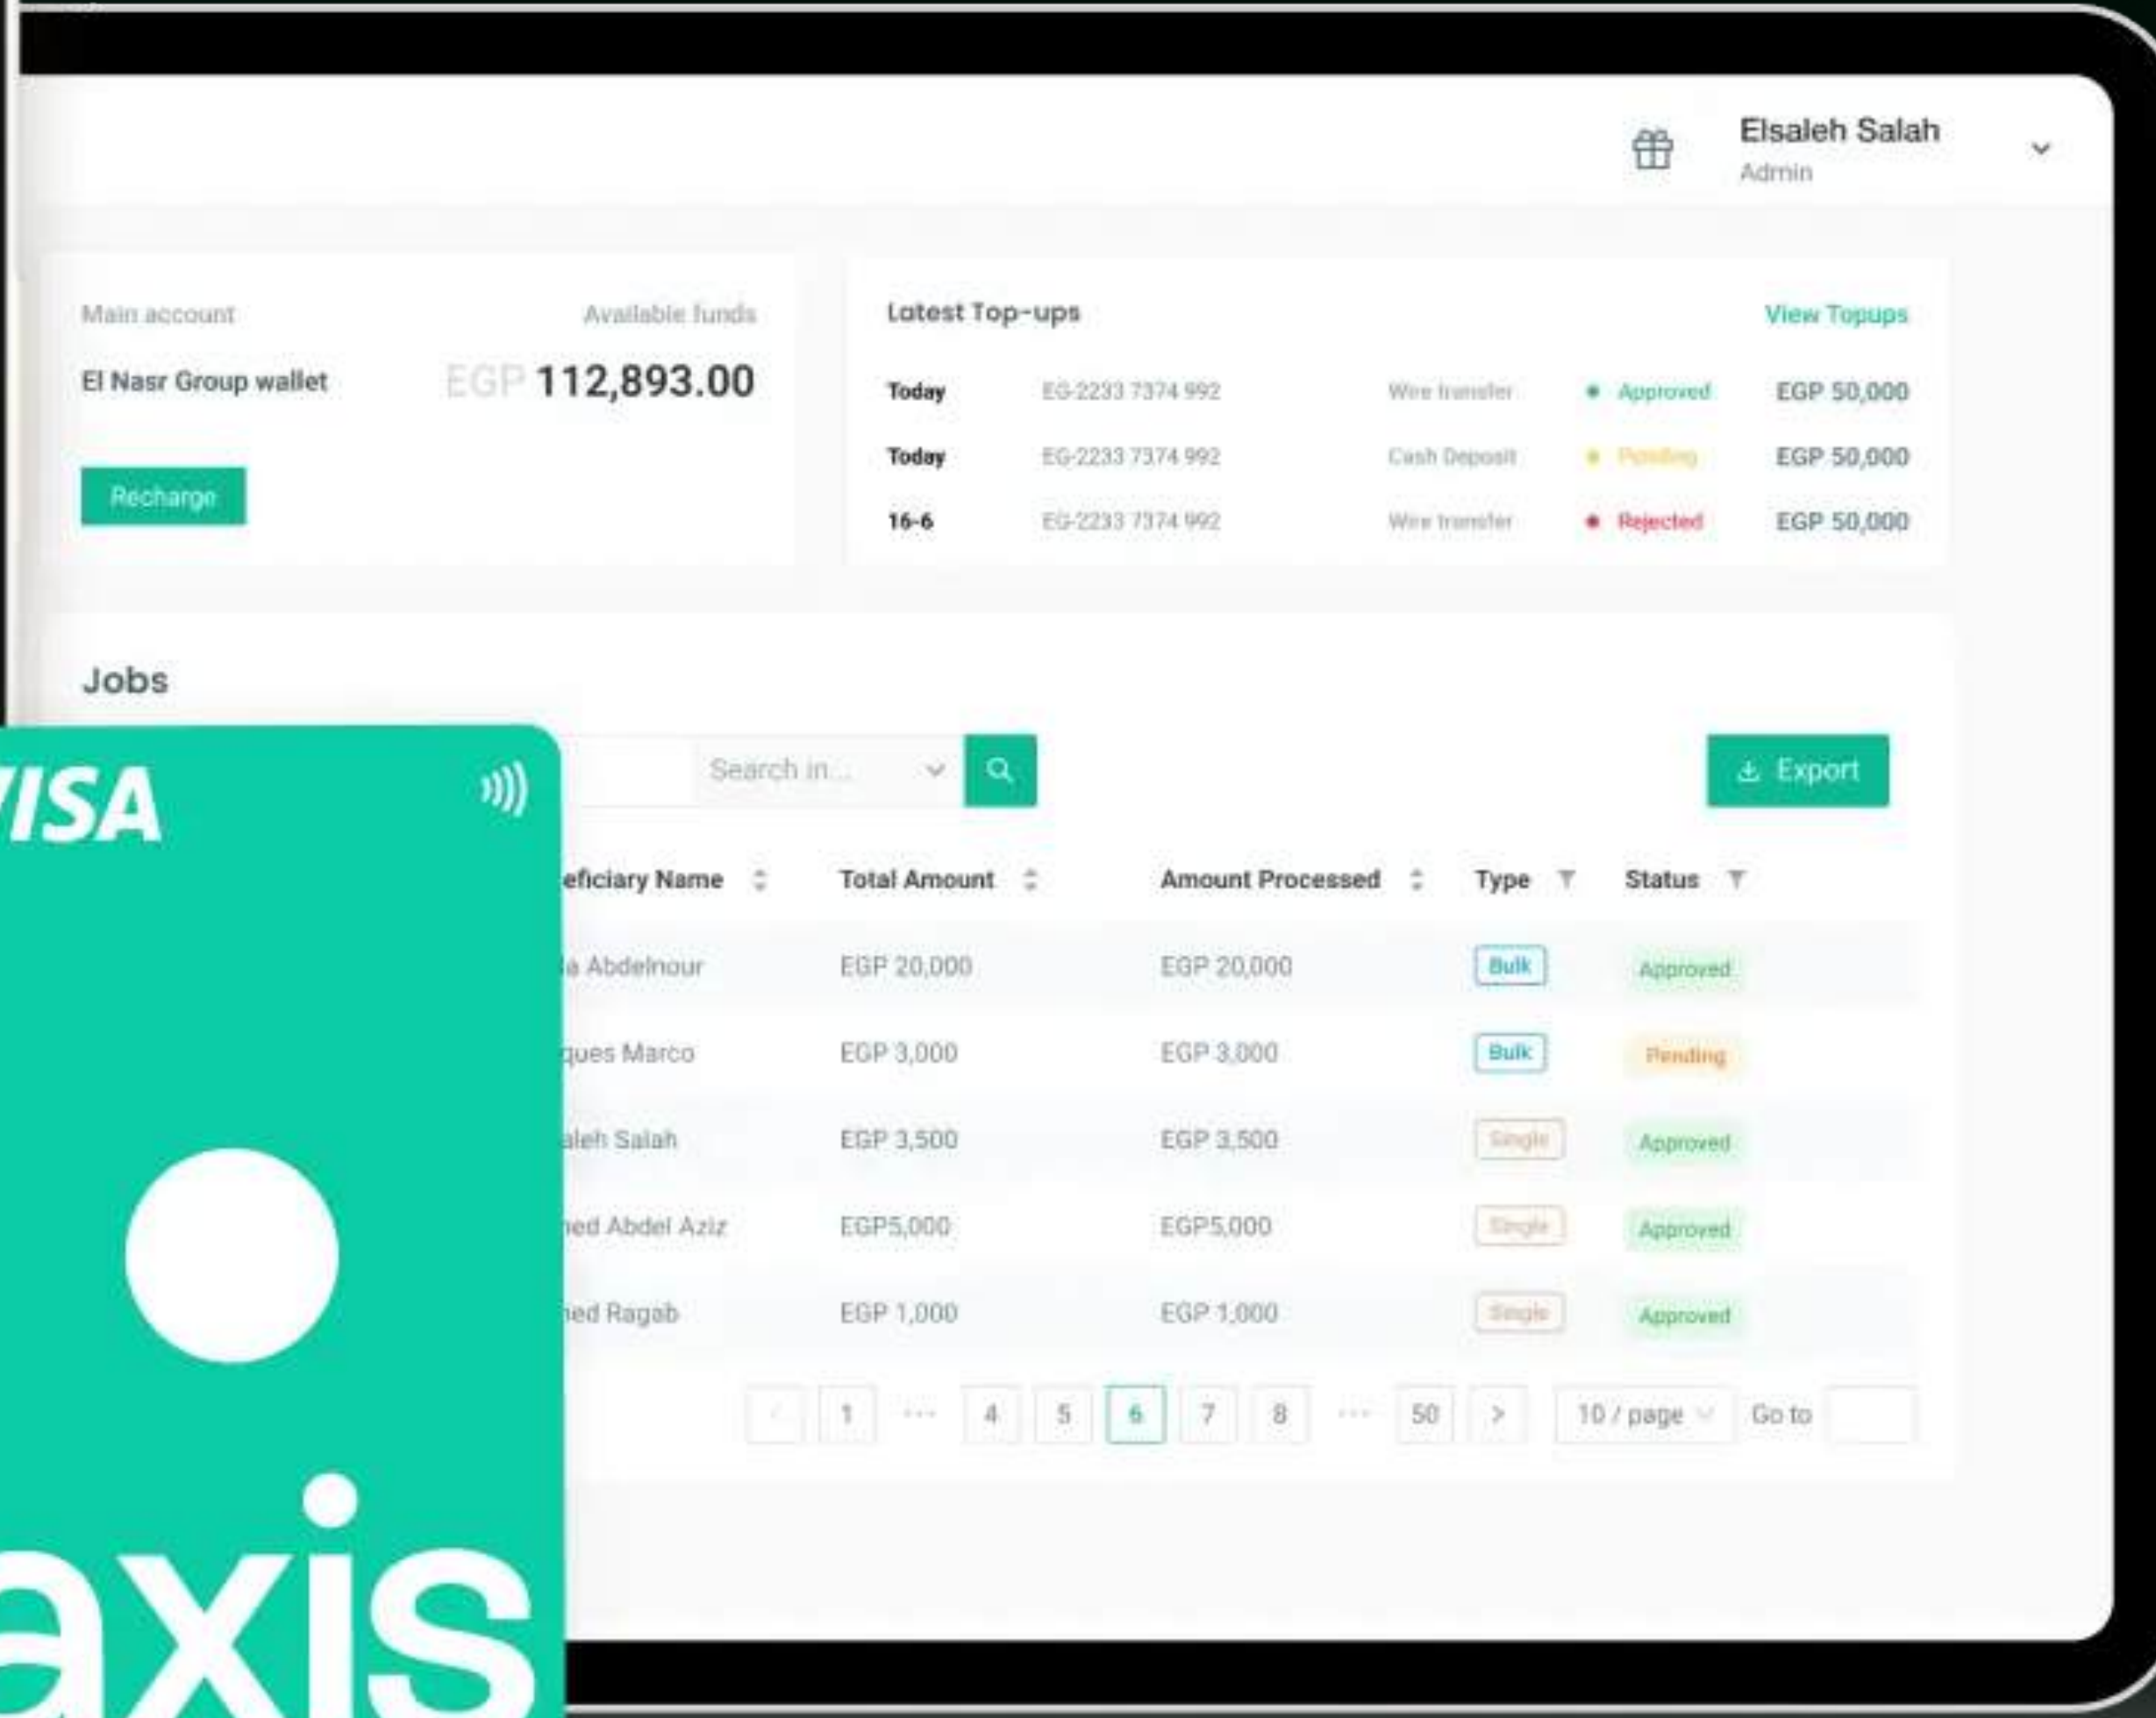

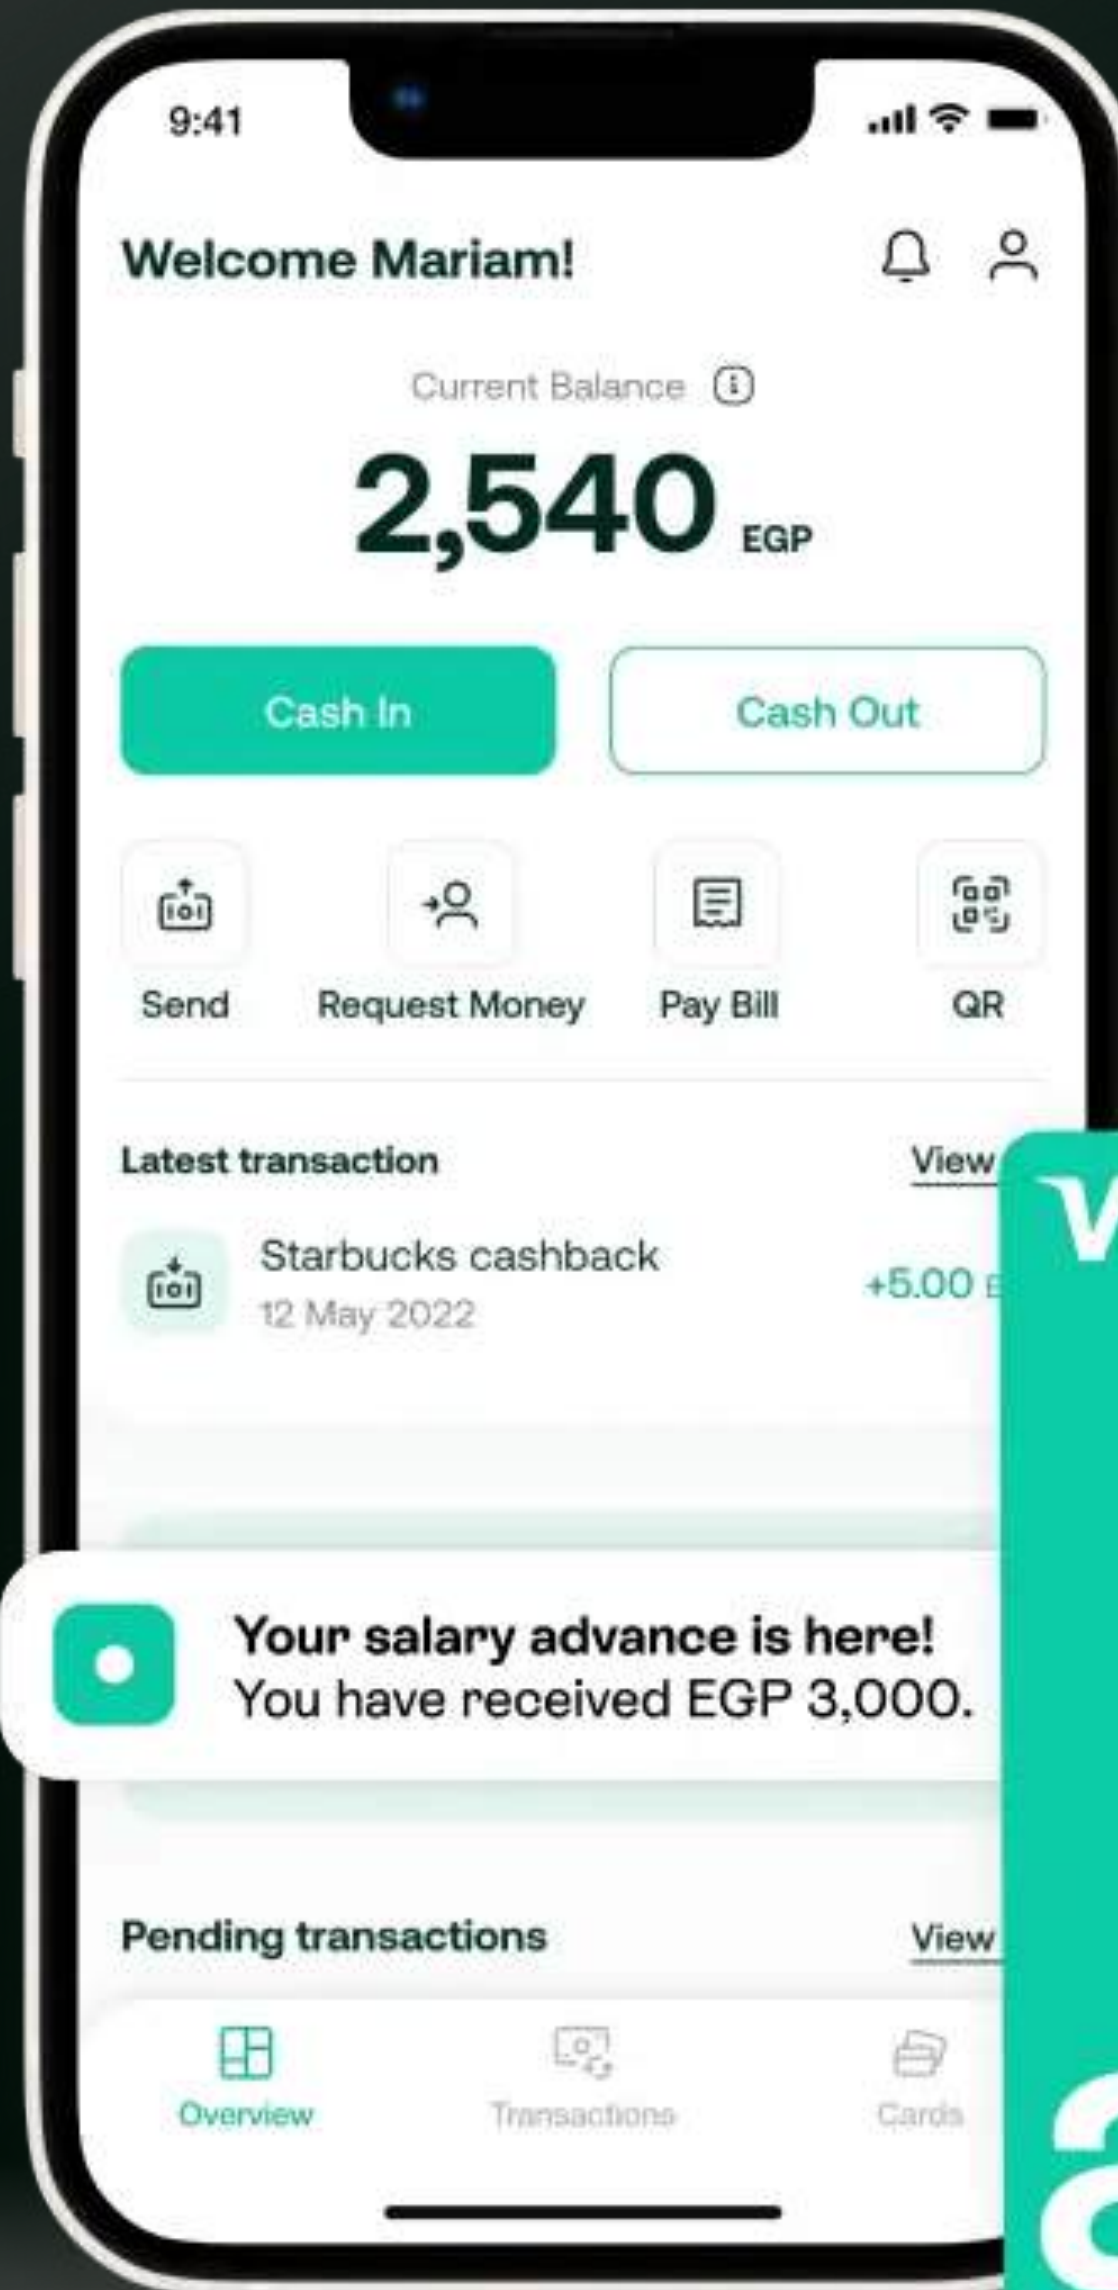

- Short-horizon exchange support.
- Budgeting and spending support.
- Trigger-driven travel recommendations.
- Decision routing across app, card, and service layers.

DELIVERABLES

- Exchange-guidance and travel-budget recommendation workflows.
- Anomaly-detection and AI-assisted risk-scoring paths for transaction-related decisions.
- Location-triggered deals and recommendation logic tied to travel context.

STACK & OUTCOMES

1. LangGraph, Google Vertex AI, Google Maps and location services, XE, travel providers, and credit-related services.
2. Built as automation and decision logic embedded inside a larger digital banking product release.

AxisPay – Payroll Services

Operational automation
SME onboarding and payroll

SYSTEM SURFACE

Built workflow automation for SME onboarding, payroll operations, anomaly checks, analytics, and adaptive pricing using ingestion pipelines, OCR, RAG patterns, and internal service integrations.

4

CORE AUTOMATION
DOMAINS

OCR

DOCUMENT PROCESSING

AI

ANALYTICS AND
PRICING LOGIC

WORKFLOW SURFACE

- OCR-assisted processing for incoming documents.
- Timesheet and operational data ingestion for payroll-adjacent workflows.
- Adaptive pricing logic based on usage and account profile signals.

DELIVERABLES

- Spreadsheet and HR-system ingestion flows for SME onboarding.
- Payroll logic with anomaly checks, salary computation inputs, and process automation for recurring operational steps.
- Expense categorization and reporting flows for monthly and quarterly analysis.

STACK & OUTCOMES

1. Neo4j, Google Vertex AI, n8n, custom RAG patterns, and internal APIs.
2. Built to reduce manual handling across onboarding, payroll, and analytical operations.

My Vodafone App – Germany

Customer automation
Telecom workflow layer

SYSTEM SURFACE

Built workflow logic for customer-care automation, contextual recommendations, and retention-triggered actions inside a telecom product environment tied to internal billing and support systems.

CORE AUTOMATION
DOMAINS

NLP

QUERY UNDERSTANDING
LAYER

API

INTERNAL SYSTEM
INTEGRATIONS

WORKFLOW SURFACE

- Knowledge retrieval and answer delivery.
- Billing-system connected automation paths.
- Context-aware offer generation and churn-related intervention logic.
- Customer-support and lifecycle automation inside a telecom app environment.

DELIVERABLES

- Customer-care chatbot flows that parsed natural-language queries and returned contextual answers from a connected knowledge base.
- Trigger-based recommendation logic for contextual offers such as roaming-related suggestions during travel scenarios.
- Retention-oriented workflow logic for identifying at-risk users and initiating targeted actions.

STACK & OUTCOMES

1. n8n-based workflow automation with internal systems APIs and confidential service integrations.
2. Built to connect customer context, support logic, and automated action triggers into executable workflow chains.

This overview includes projects I'm authorized to showcase. Many other engagements remain confidential. References from listed clients are available upon request.
